

DIGGALINK ATTACHMENTS ARE WORKING HARD

Diggalink is quickly carving a market manufacturing a tough range of attachments. An affordable and reliable option, the attachments are proving their worth in some of New Zealand's harshest operating environments. A large number of NZ farmers, contractors and builders have used Diggalink attachments over the last 12 years and the options and functions of the attachments are huge.

Root Rakes & Rippers

Land clearing can be a time consuming operation without the right attachments and we make a wide range of rakes and rippers that are up to the task. Both Root Rakes and Rippers come in sizes for 1 - 30t machines. Root Rakes can be made to varying widths, tyne length and curve to suit your application; they can also be supplied with Pipelaying Shutes.

Trenching, Digging, Wide & Spade Buckets

Available from 1 - 25t sizes with various widths available. These buckets can be fitted with wear strips, side wear plates, side cutters, teeth, cutting edges or slippers as required.

Tilt Buckets

Tilt Buckets are one of Diggalink's most popular attachments. Single or twin ram options are available complete with cylinder guards for added protection.

Drain Cleaning Buckets

Available in the 6 - 20t range (1.8 - 2.95m width) drain cleaning buckets are a flexible tool for farmers & contractors.

Grabs & Grapples

Excavators fitted with Diggalink grabs and grab buckets are used in the loading of waste, greenwaste and building products in a number of refuse stations and demolition sites around NZ. Diggalink grabs can be fitted either directly to the excavator dipper arm or coupled to a quick hitch. As with all Diggalink attachments our grabs can be custom-built to suit almost any application.

Thumbs

Diggalink thumb attachments make it possible for excavators to handle material very efficiently. The need for extra machines, labour and chains is often eliminated. They operate off the crowd cylinder hydraulics and have adjustable strut mounts to change working parameters of the grab depending on the position of the excavator relative to the work.

Screening Buckets

Screening buckets are a specialised attachment with variable width slots, available for 6 - 25t excavators.

DN Hydraulic Quick Hitches

Cost effective and superior hydraulic quick hitches are available from 3 - 25t.

EDT Rock Breakers

Tough Quality and Reliable rock breakers (hammers) at the best price. Available in 1 - 25t sizes. We believe it would be hard to find better value and excellence.

CIMAR Compaction, Cutting & Concreting Equipment
